# Our History

Schiffini, **leading manufacturer of high-end kitchen furniture renowned worldwide**, was established in the 1920s to supply nautical fittings to the Italian Navy dockyard in La Spezia.

It subsequently specialized in the furnishings of military and civil ships. In the 1950s Schiffini re-oriented itself toward the kitchen furniture industry and became the first Italian company to start the series production of modular kitchens.

At the beginning of the 1960s Schiffini was among the few distinctive companies which were instrumental in the creation of "**Italian Design**". During this important phase, collaboration between Schiffini and prominent architects and designers was initiated.

Particularly significant to Schiffini's history is the relationship with **Vico Magistretti**, which influenced and renovated significantly the company's image and thinking. Initiated in 1965, this collaboration led to numerous and fortunate intuitions that gave rise to kitchen models, still "classics" of modern-day production.

In addition to Magistretti, in 2002 Schiffini started new collaborations with other noted architects and designers, renowned in Italy and abroad. Whereas the aesthetics and design of Schiffini kitchens are constantly changing, the company's philosophy has remained unaltered over the years.

Today as yesterday, design, use of materials, refined finishes and attention to details are skillfully combined to offer a comfortable kitchen space with an evocative power, that encourages socialization and is ideally suited for everyday living. To testify the main stages of the 80 year company's evolution, that made Schiffini renowned worldwide, a collection of historical pieces has been housed in the company headquarters in Ceparana.

# Schiffini and the environment

Schiffini has always demonstrated a great commitment in manufacturing products with non-toxic, recyclable and environmentally-friendly materials.

Schiffini's cabinets are made of wood fibre panels or extruded anodized aluminium. The former are made of 100% recycled wood fibre, **FSC** (certification authority of ecological wood) certified, and are resistant to humidity (complying with Class **P3** of **EN 312** regulations).

These panels are marked **IDROLEB** and are **F\*\*\*\* (FOUR STARS)** certified, testifying an almost null emission of formaldehyde (a chemical compound potentially toxic at high values). The **FOUR STARS** is the severest regulation in this subject and is compulsory in Japan, where the most restrictive limitation of these emissions are enforced. It must be underlined that almost the totality of other kitchen products which are present on the domestic and international market do not conform to these standards.

All structure edges are bordered with extra-thick ABS.

All units are assembled with linking screws and cams, without any glue, to avoid pollution and harmful fumes. This system is "unique" and Schiffini is the sole manufacturer of modular kitchens to adopt it, in Italy and abroad. The system makes it easy to disassemble the cabinets for maintenance or to replace single deteriorated items (cabinets are anyway supplied assembled).

Also extruded aluminium structure cabinets comply with ecology and hygiene requirements, being waterproof, resistant to external agents, fully recyclable and fireproof. They can completely be dismantled, as the wood fibre panel structures, and fitted internally with hygienic, unbreakable and recyclable internal shelves of tempered glass.

Schiffini's kitchen doors and internal structures have been conceived and designed with the same philosophy: they are constructed with non-polluting production systems, are completely non-toxic and made from recycled and recyclable materials.

**Space System** deep drawers are part of an exclusive project studied by Schiffini and available with the kitchens of its production only. These functional elements, which are made of aluminium and tempered glass, are extremely strong and hygienic and can easily be cleaned up.

Wood and veneerings used by Schiffini are not derived from primary forests but from renewable plantations, and this underlines the great commitment that Schiffini demonstrates relative to environmental protection and the defence of ecological heritage.

The company was granted the **UNI EN ISO 9001:2008** certification and the single components comply with specific quality and reliability certifications released by important quality authorities such as **CATAS, LGA, TUV**, etc.

In the United States of America Schiffini's kitchens are marketed under the "**GreenSpec**" certification, which gives evidence of non-toxicity, recyclability and ecological conformity.

Large supplies of these kitchen models have been provided to furnish dwelling complexes built with eco-friendly materials and technologies.

# Schiffini Contract Division

Schiffini Contract Division was set up in 2005 as an instrumental internal operating unit to meet the need of the high end international real estate market to provide dwellings fitted out with exclusive trimmings and furniture, adding an increased value to the property. Schiffini Contract Division provides high quality products and services targeted at designers, promoters and building contractors specialized in the kitchen sector.

Such services include: **consulting, planning, personalization, delivery** and **installation** worldwide, besides post-sale **assistance**. All that in perfect synergy with the customers, with their requirements and expectations, achieving the possibility of providing many kitchen solutions and finishes.

Located in western Beijing, on the north side of Yuyantan park district, famous for having the largest garden of cherry in Asia. High-level design kitchens, which combine the uniqueness of the model Cinque Terre, design by Vico Magistretti, with the linearity of the collection One: a perfect mix of classical and modern.

# Schiffini Marine Division

With the Marine Division Schiffini confirms its relationship with the nautical world: the company's founder, in fact, began his activity as a maker of nautical furnishing for the Royal Navy. Schiffini has been collaborating for over eight years with major Italian and foreign shipyards to provide complete furnishings of the kitchen area aboard big yachts.
